UNITED UNIVERSITY

Session 2026–27

UNDER THE GUIDANCE OF

Mr. Ferhan Ahmed

United University

DECLARATION

I hereby declare that the project report entitled **Customer Purchase Behaviour Analysis Using Data Analytics** has been prepared for academic purposes. The report demonstrates how customer transaction information can be organized, analysed, visualized, and interpreted to understand purchasing patterns. The accompanying dataset contains illustrative sample records generated for demonstration and does not represent verified transactions from an actual business.

Student: Shruti Singh
Signature: _____
Date: _____

ACKNOWLEDGEMENT

I express my sincere gratitude to my faculty members and United University, Prayagraj, for their guidance and for providing the opportunity to complete this project. I am thankful to everyone who supported my learning in business analytics, customer behaviour, data preparation, and visualization. I also acknowledge the educational resources and software documentation used while preparing this report.

ABSTRACT

This project studies customer purchase behaviour through data analytics. Customer transactions contain useful information about order value, purchase frequency, product preferences, channels, payment methods, satisfaction, and returns. By preparing and analysing this information, businesses can understand how customers buy, identify repeat-purchase patterns, compare customer groups, and improve marketing and service decisions. The project demonstrates a descriptive analytics framework using Microsoft Excel and Power BI concepts. It includes data discussion, cleaning, KPI calculation, customer and product analysis, dashboard development, results, observations, and recommendations. The accompanying 240-row dataset is illustrative and all numerical findings are calculated from that sample.

ABBREVIATIONS

Term	Meaning
AOV	Average Order Value
BI	Business Intelligence
CRM	Customer Relationship Management
CSV	Comma-Separated Values
DAX	Data Analysis Expressions
KPI	Key Performance Indicator
RFM	Recency, Frequency, Monetary Value
ROI	Return on Investment

1. TITLE

1.1 Project Overview

The title of this project is **Customer Purchase Behaviour Analysis Using Data Analytics**. It demonstrates how customer order records can be transformed into useful information about purchasing frequency, spending patterns, product preferences, purchase channels, satisfaction, and returns.

1.2 Area of Study

The project relates to marketing management, consumer behaviour, retail management, business analytics, and customer relationship management. It focuses on descriptive analytics: summarizing historical transactions to understand what customers have purchased and how their behaviour differs across groups.

1.3 Scope of the Project

• Analysis of customer orders, order value, and purchase frequency.

• Comparison of customer segments and product categories.

• Evaluation of online, mobile-app, and physical-store channels.

• Review of payment preferences, satisfaction ratings, and returns.

• Creation of summary tables, charts, and an Excel dashboard.

2. INTRODUCTION

2.1 Background of the Study

Customer purchase behaviour refers to the decisions and actions customers take when selecting, purchasing, using, and evaluating products or services. It is influenced by needs, income, preferences, price, product quality, convenience, promotions, brand trust, and previous experiences. Understanding these patterns helps businesses develop suitable products, pricing, communication, and customer service strategies.

2.2 Importance of Studying Purchase Behaviour

• Helps identify popular products and categories.

• Supports customer segmentation and targeted marketing.

• Shows how customers use different purchase channels.

• Helps assess repeat purchasing and customer loyalty.

• Highlights satisfaction issues and product-return patterns.

• Supports better inventory, promotion, and service planning.

2.3 Meaning of Data Analytics

Data analytics is the process of collecting, cleaning, organizing, examining, and interpreting data to discover useful information. In customer analysis, it can summarize transactions, compare groups, identify trends, and present findings through dashboards.

2.4 Types of Data Analytics

Type	Purpose	Customer Example
Descriptive	Explains what happened	Monthly orders and average order value
Diagnostic	Explores why it happened	Investigating a rise in returns
Predictive	Estimates what may happen	Predicting repeat purchase likelihood
Prescriptive	Suggests possible actions	Recommending a suitable offer

2.5 Objectives of the Project

• Understand customer purchase behaviour and its business importance.

• Prepare and examine a transaction-level customer dataset.

• Calculate key customer and purchase indicators.

• Compare segments, categories, channels, and payment methods.

• Study repeat purchases, customer satisfaction, and returns.

• Create visual reports and provide practical recommendations.

3. PROBLEM STATEMENT

3.1 Statement of the Problem

Businesses collect customer and order data through websites, mobile applications, and physical stores. However, transaction records may remain scattered across systems or be reviewed only through basic sales totals. Without structured analysis, it can be difficult to understand which customer groups purchase frequently, which products attract demand, which channels are preferred, and where customer experience may need improvement.

3.2 Need for the Study

A structured descriptive analysis can convert transaction records into clear measures and comparisons. It can help management distinguish between high order volume and strong customer value, understand the contribution of repeat customers, and identify areas that require further investigation.

3.3 Research Questions

• How many orders and unique customers are represented in the dataset?

• Which product categories generate the highest order value?

• Which customer segments contribute most to orders and revenue?

• Which purchase channel is most frequently used?

• What is the repeat-customer rate in the sample?

• What patterns appear in satisfaction ratings and product returns?

3.4 Problem-Solving Approach

The project addresses these questions by inspecting the dataset, checking data quality, calculating KPIs, grouping records by customer and purchase dimensions, preparing visualizations, and interpreting the results. The analysis is descriptive and does not establish that one factor causes another.

4. DATA DISCUSSION

4.1 Data Requirements

A customer purchase dataset should include transaction identifiers, order dates, customer identifiers, product information, quantity, price, discount, order value, purchase channel, payment method, and relevant service indicators. Customer identifiers should be anonymized when personal identity is not required.

4.2 Dataset for Demonstration

The accompanying workbook contains 240 illustrative order records covering January to December 2025. The records were generated for academic demonstration. They do not represent verified sales or customer records from a real company.

Dataset Detail	Description
Number of records	240 illustrative orders
Unique customers	76
Date range	01 January 2025 – 31 December 2025
Currency	Indian Rupees (INR)
Purchase channels	Online Website, Mobile App, Physical Store
Main dimensions	Customer segment, city, region, channel, category, product
Measures	Quantity, order value, estimated profit, rating, returns

4.3 Important Dataset Fields

Field	Description
Order ID	Unique identifier for each order
Customer ID	Anonymized customer reference
Customer Segment	New, occasional, repeat, or loyal customer
Purchase Channel	Website, mobile app, or physical store
Product Category	Broad product group
Order Value	Value of the order after discount
Satisfaction Rating	Customer rating on a 1–5 scale
Returned	Indicates whether the order was returned

4.4 Data Quality Considerations

• Check missing customer, product, date, and order identifiers.

• Remove duplicate order records where appropriate.

• Confirm date, currency, percentage, and numeric formats.

• Check that order value reflects quantity, price, and discount.

• Use consistent category, segment, channel, and payment labels.

• Protect customer identifiers and avoid unnecessary personal information.

5. METHOD, TOOLS AND TECHNOLOGIES USED

5.1 Research Method

The project uses descriptive and comparative analysis. Descriptive analysis summarizes orders, customers, revenue, and satisfaction. Comparative analysis evaluates differences across customer segments, product categories, channels, and months. The sample is used to demonstrate the method rather than to make claims about a real business.

5.2 Microsoft Excel

Excel is used to store the transaction-level data, inspect records, apply formulas, create PivotTables, calculate KPIs, and prepare charts. The accompanying workbook includes a dashboard and supporting summary sheets.

5.3 Microsoft Power BI

Power BI can be used to connect data, transform records, create a data model, define measures, and build interactive reports. Filters can allow users to explore results by segment, region, channel, and category.

5.4 Power Query and DAX

Power Query supports importing, cleaning, and transforming data. DAX can be used to create measures such as total revenue, total orders, unique customers, average order value, and repeat-customer rate.

5.5 Technology Summary

Tool	Main Purpose
Microsoft Excel	Data inspection, formulas, PivotTables, charts, dashboard
Power BI	Interactive visual reporting
Power Query	Data cleaning and transformation
DAX	Measures and calculated metrics
Python / pandas (optional)	Data preparation and additional analysis

6. WORKFLOW

6.1 Overview of the Analytical Workflow

Step	Activity	Expected Output
1	Define objectives and questions	Analysis plan
2	Collect or prepare sample data	Raw dataset
3	Inspect fields and records	Data understanding
4	Clean and transform data	Prepared dataset
5	Calculate customer KPIs	Summary measures
6	Compare customer and purchase dimensions	Grouped summaries
7	Create charts and dashboard	Visual report
8	Interpret results	Observations
9	Recommend actions	Management suggestions

6.2 Analytical Dimensions

• Customer: unique customers, customer segment, repeat purchase.

• Product: category, product, quantity, and order value.

• Channel: website, mobile application, and physical store.

• Geography: city and region.

• Experience: satisfaction rating and returned orders.

• Time: monthly orders and revenue.

7. PROCEDURE

7.1 Step 1 – Import the Dataset

Open the Excel workbook and select the Customer_Data worksheet. Confirm that the first row contains field headings and that all 240 records are imported.

7.2 Step 2 – Understand the Dataset

Review the column names, data types, number of records, unique customers, order dates, product categories, channels, and customer segments.

7.3 Step 3 – Clean and Prepare Data

• Check duplicate Order IDs and missing values.

• Convert Order Date to a date format.

• Confirm that quantity, price, discount, order value, and profit are numeric.

• Standardize labels for customer segments, channels, and categories.

• Check rating values and return indicators.

7.4 Step 4 – Calculate Key Performance Indicators

KPI	Calculation	Purpose
Total Orders	Count of Order IDs	Measures order volume
Unique Customers	Distinct count of Customer IDs	Measures customer base
Total Revenue	Sum of Order Value	Measures order value
Average Order Value	Revenue ÷ Orders	Average spend per order
Repeat Customer Rate	Customers with 2+ orders ÷ unique customers × 100	Indicates repeat activity
Average Satisfaction	Average of ratings	Summarizes reported experience
Return Rate	Returned orders ÷ total orders × 100	Tracks returns

7.5 Step 5 – Customer Segment Analysis

Group orders by customer segment. Compare order count, unique customers, total revenue, and average order value. Interpret segment contribution while recognizing that the segment definitions in the sample are illustrative.

7.6 Step 6 – Product and Category Analysis

Group records by product category and product. Compare order volume, revenue, quantity, and satisfaction rating to identify the categories that contribute most to the sample.

7.7 Step 7 – Channel and Payment Analysis

Compare the number of orders and order value across website, mobile application, and physical store channels. Summarize payment methods to understand the distribution of payment preferences.

7.8 Step 8 – Satisfaction and Returns

Review average satisfaction ratings and the proportion of returned orders. Further investigation would be required to understand the reasons for returns or low ratings.

7.9 Step 9 – Dashboard Development

Create KPI cards and charts for category revenue, monthly revenue, and orders by customer segment. Add filters for channel, region, category, and date when building an interactive Power BI version.

8. RESULT

8.1 Key Performance Indicators

The following values are calculated from the illustrative 240-order dataset included in the workbook. They are demonstration results, not verified business performance.

KPI	Illustrative Result
Total Orders	240
Unique Customers	76
Total Order Value	■515,306.65
Average Order Value	■2,147.11
Repeat Customer Rate	88.2%
Average Satisfaction	3.87 / 5
Return Rate	4.2%
Estimated Profit	■141,875.96

8.2 Category Results

Product Category	Orders	Revenue (INR)	Average Rating
Beauty & Personal Care	65	■97,940	3.68
Electronics	56	■150,841	3.77
Fashion	59	■125,272	4.17
Home & Kitchen	60	■141,254	3.87

8.3 Customer Segment Results

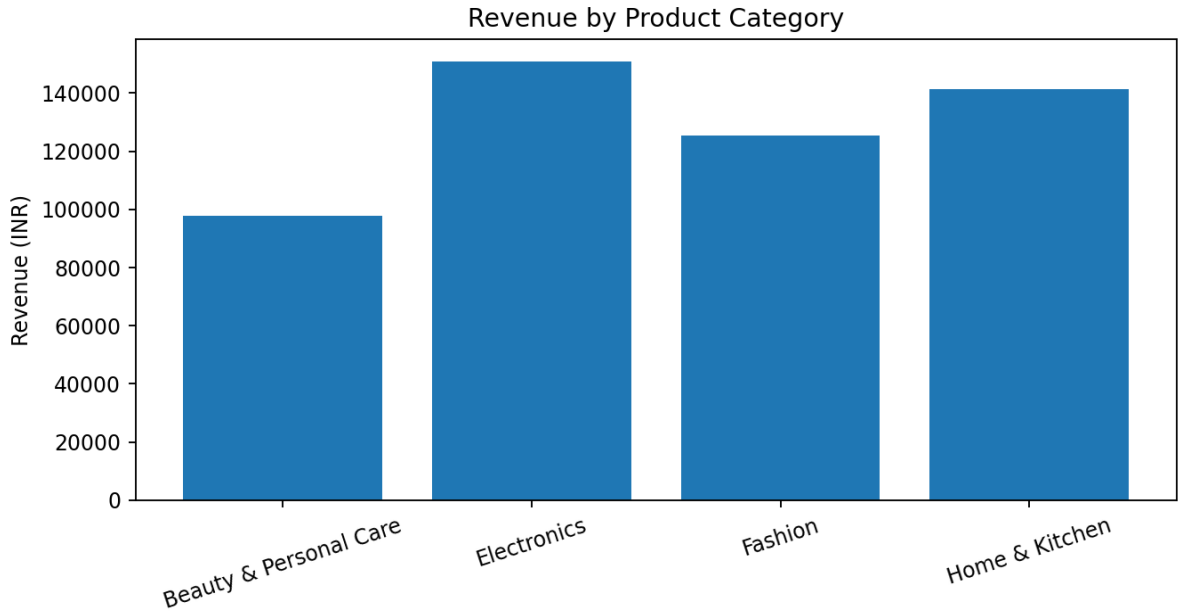

Customer Segment	Orders	Customers	Revenue (INR)
Loyal Customer	51	17	■92,355
New Customer	45	14	■96,384
Occasional Customer	63	21	■147,793
Repeat Customer	81	24	■178,775

8.4 Interpretation

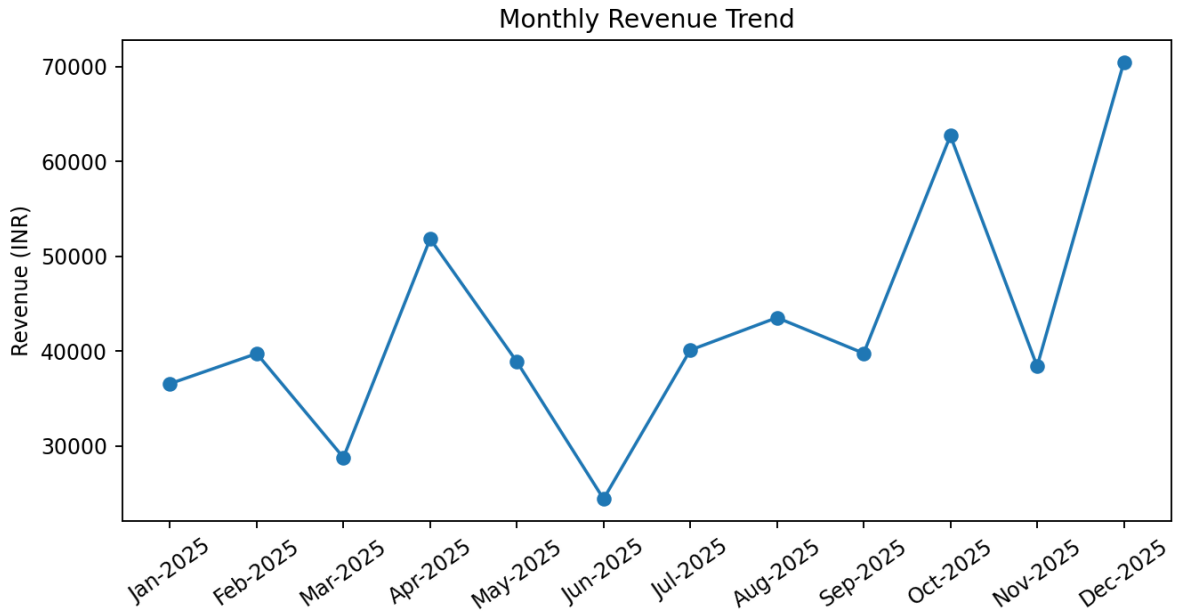

The summary tables and dashboard make it possible to compare customer groups, product categories, and purchase channels. The repeat-customer rate indicates the share of identified customers with more than one order in this sample. Ratings and returns provide additional experience-related indicators. These measures should be interpreted together rather than in isolation.

8. RESULT – VISUAL ANALYSIS

The following visualizations are generated from the illustrative customer purchase dataset.

The category chart compares order value across the four product groups.

The monthly chart displays the distribution of order value across the year.

8. RESULT – VISUAL ANALYSIS (CONTINUED)

The segment chart compares the number of orders assigned to each customer segment.

Interpretation note: These charts use illustrative sample records created for this academic project. They should not be presented as actual company results.

9. OBSERVATION

9.1 Key Areas to Observe

• Customer concentration: a subset of customers may account for multiple orders.

• Segment contribution: order count and revenue may differ across new, occasional, repeat, and loyal groups.

• Category preference: some product categories may generate higher order value than others.

• Channel usage: customers may distribute purchases across online, mobile, and store channels.

• Customer experience: ratings and returns can highlight areas for further review.

• Time variation: monthly order value may fluctuate during the year.

9.2 Data-Based Interpretation

The sample contains 240 orders from 76 unique customer IDs. The average order value is ■2,147.11, while the calculated repeat-customer rate is 88.2%. The average satisfaction score is 3.87 out of 5. These figures describe only the generated dataset and cannot be generalized to a wider customer population.

9.3 Caution in Interpretation

Descriptive analysis identifies patterns but does not prove why those patterns occurred. For example, a higher average rating for one channel does not prove that the channel itself caused better satisfaction. Additional customer feedback, controlled research, and verified operational data would be required.

10. RECOMMENDATION

10.1 Customer Relationship Management

• Develop appropriate communication for new, occasional, repeat, and loyal customers.

• Use purchase history responsibly to personalize relevant offers.

• Monitor repeat purchase patterns over time rather than relying on a single period.

10.2 Product and Category Strategy

• Review category performance when planning product assortment.

• Ensure popular products have suitable stock availability.

• Investigate products with high return frequency or lower satisfaction.

10.3 Channel Strategy

• Maintain a consistent customer experience across website, app, and physical stores.

• Review channel-level order patterns and customer feedback.

• Make payment and checkout processes clear and convenient.

10.4 Customer Experience

• Collect feedback on product quality, delivery, and service.

• Review return reasons to identify recurring issues.

• Use satisfaction indicators alongside operational measures.

10.5 Reporting and Data Governance

• Refresh the dashboard regularly using verified business data.

• Maintain consistent customer and product identifiers.

• Restrict access to customer-level information and use anonymized data where possible.

11. CONCLUSION

Customer Purchase Behaviour Analysis Using Data Analytics demonstrates how transaction records can be converted into meaningful information about customers and their purchasing activity. By examining order value, purchase frequency, customer segments, product categories, channels, satisfaction, and returns, businesses can develop a clearer understanding of their customers.

The project presents a structured process covering data inspection, preparation, KPI calculation, customer and product comparisons, visualization, interpretation, and recommendations. Excel provides accessible tools for organizing and analysing data, while Power BI can support interactive reporting.

The illustrative dataset shows how descriptive analytics can support customer-focused decision-making. Actual business decisions must be based on accurate, representative, and appropriately governed customer data.

11.1 Learning Outcomes

• Understanding the relationship between customer behaviour and marketing decisions.

• Learning how to inspect and prepare transaction data.

• Calculating customer and purchase-related KPIs.

• Comparing segments, products, channels, and time periods.

• Creating charts and dashboards for business communication.

• Recognizing data privacy and interpretation limitations.

12. LIMITATIONS AND FUTURE SCOPE

12.1 Limitations

• The dataset is illustrative and does not represent a real retailer.

• A sample of 240 orders may not represent a wider customer population.

• Customer segments are predefined for demonstration.

• The dataset does not contain detailed customer feedback or reasons for returns.

• Descriptive analysis does not establish causation or predict future behaviour.

12.2 Future Scope

• Use verified customer relationship management data.

• Apply RFM analysis to classify customers by recency, frequency, and monetary value.

• Use predictive analytics to estimate repeat purchase or churn likelihood.

• Conduct market basket analysis to identify products purchased together.

• Evaluate campaign effectiveness using controlled comparisons.

• Build an interactive Power BI dashboard with scheduled refresh.

12.3 Ethical and Responsible Data Use

Customer data should be handled responsibly. Personal identifiers should be removed or protected when not required. Access to sensitive information should be limited, and data should be used only for legitimate academic or business purposes. Sample or synthetic records must be clearly identified and never represented as real customer information.

APPENDIX A – ILLUSTRATIVE DATASET & EXCEL WORKBOOK

The accompanying workbook contains 240 generated illustrative customer-order records. The values are created for academic demonstration and are not verified records from an actual retailer.

Item	Workbook Detail
Workbook	Customer_Purchase_Behaviour_Analysis_Dashboard.xlsx
Transaction worksheet	Customer_Data
Number of records	240
Number of fields	20
Date range	01 Jan 2025 – 31 Dec 2025
Currency assumption	Indian Rupees (INR)
Main dimensions	Customer, segment, city, channel, category, product
Measures	Quantity, order value, estimated profit, rating, returns

Workbook Structure

Dashboard: KPI cards and three charts. Customer_Data: transaction-level sample records. Category_Summary, Segment_Summary, Channel_Summary, Monthly_Summary, and Product_Summary: supporting grouped summaries.

Illustrative Headline KPIs

KPI	Sample Result
Total Orders	240
Unique Customers	76
Total Revenue	■515,306.65
Average Order Value	■2,147.11
Repeat Customer Rate	88.2%

APPENDIX B – CUSTOMER_DATA WORKSHEET

The following pages reproduce the illustrative transaction-level records from the accompanying Excel workbook. Customer IDs are anonymized.

Order ID	Date	Customer ID	Segment	City	Channel	Category	Product	Qty	Order Value
